

VERGO
WHITEPAPER V1.0

Introduction

VER Token is built on Stellar Network, with speed more than 1500 transactions per second. Its need only 3-5 seconds to confirm transaction. So you will receive your VER token on your wallet in less than 5 seconds. Stellar Blockchain cost 0.00001 XLM (~ 0.000001 USD) for transaction fee. With near zero fee you can make any transactions for any price of payment.

The Problems

On 2017 data, globally 1.7 billion adult remain unbanked, so they could not access financial services. They even could not bought items on e-commerce marketplace in their country. Regulations and terms of banking systems make unbanked people could not have bank account. In many countries you must have a minimum deposit and a few documents to create bank account.

To make global transactions you must have bank account and use financial services for payment. You will charged double fees from bank and financial service for that payment. For micropayment the charged fees are too high.

Bitcoin makes global transactions more simple and easy, it needs no bank account and no financial services. But Bitcoin have scalability problem, Bitcoin blockchain can process only 7 transactions per second, while Ethereum blockchain process 15 transactions per second.

Bitcoin network is too slow, it needs an hour or more to receive a payment, and transaction fee is too expensive, the network charge 2-5 USD per transaction.

If you buy a cup of coffee for 1-3 USD and pay with Bitcoin, it charge 3-8 USD to your balance. So Bitcoin is not design for micropayment.

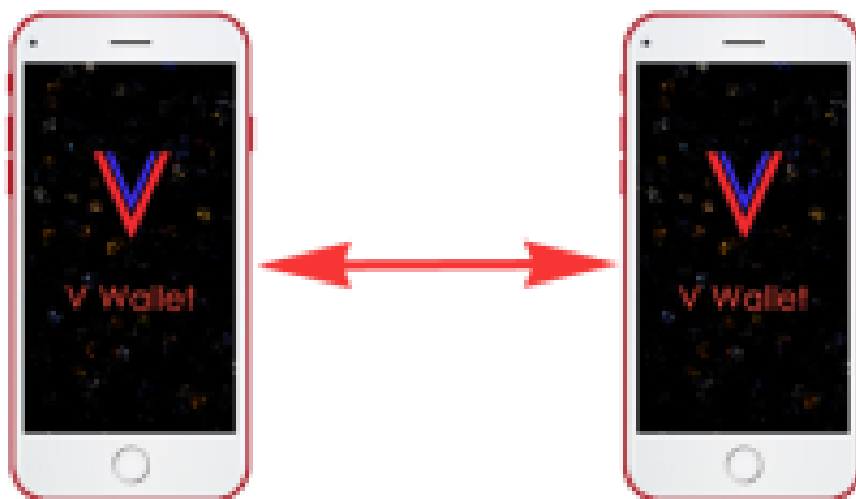

OUR SOLUTION

Stellar Blockchain Network can process over 1500 transactions per second, so VER Token does. VER Token needs only 3-5 seconds to receive a payment with near zero fee, so VER Token is suitable for micropayment.

V Wallet

V Wallet is an app that use for payment, optimizing through VPAY System. Its simple and easy to use, suitable for micropayment.

For unbanked people just need to download the app to connect the world through VPAY System and they can start make simple transactions to all over the world.

ROADMAP

August 2019 - Start Pre-Sale and Token Sale (IEO)

August 2019 - Listing on SDEX (Stellar Decentralized Exchange)

August 2019 - Airdrop for community

October 2019 - Listing on Coinmarketcap

February 2020 - Development of V Wallet App

2021 - Development of VPAY System Network

TEAM

Veronica Chen - CEO

PJ – Lead Developer

MOX – Lead Operational

LOT – Marketing

7ACE– Developer

VER Token Specification

Token Name : VERGO

Token Symbol : VER

Issuer Address:

GDIOJHRC5AAEPOIP4QCPVN5ERKDYKD73EVHK3RDUZS7UDWLAQJ7V3TOP

Max Supply : 27,777,000,000 VER

Token Sale Price : 1 VER = 0.0007 XLM (~0.00007 USD)

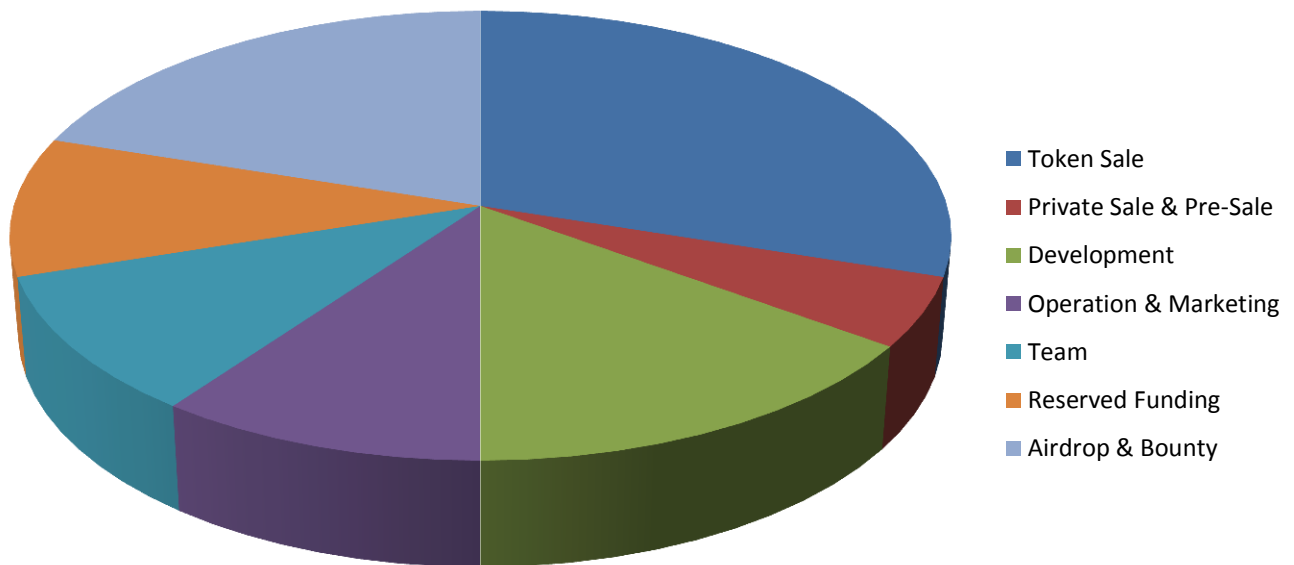

Platform : Stellar Network

VER Explorer :

<https://stellar.expert/explorer/public/asset/VER-GDIOJHRC5AAEPOIP4QCPVN5ERKDYKD73EVHK3RDUZS7UDWLAQJ7V3TOP>

VER Token Distribution

Token Sale

Token Sale will distribute through Stellar Decentralized Exchange

Stellarport
